

React Interview Preparation Guide

1. Hooks (Basic to Intermediate) [cite: 2]

Version 1: Detail Mein

useState state management ke liye aur useEffect side effects handle karne ke liye use hota hai[cite: 3]. Complex state ke liye useReducer behtar hai[cite: 4]. Interview ke liye useMemo aur useCallback ko samajhna zaroori hai[cite: 5].

Version 2: In Short

State, Lifecycle, aur Performance optimization ke liye built-in hooks ka sahi istemal.

2. Rendering & Re-renders [cite: 7]

Version 1: Detail Mein

Virtual DOM real DOM ko update karne ka tez tareeka hai[cite: 8]. React.memo se hum faltu re-renders rok sakte hain[cite: 9, 10]. Lists mein "key" prop lazmi use karein[cite: 11].

Version 2: In Short

Virtual DOM ka concept aur unnecessary updates se bachne ki techniques.

3. API Calls (Side Effects) [cite: 12]

Version 1: Detail Mein

useEffect ke andar Fetch ya Axios use kiya jata hai[cite: 13]. Isme Loading, Error, aur Success states handle karna zaroori hai[cite: 14].

Version 2: In Short

External data fetching aur request lifecycle management.

4. Routing (React Router v6) [cite: 16]

Version 1: Detail Mein

BrowserRouter, Routes, aur Route se navigation setup hoti hai[cite: 17]. Protected routes security ke liye aur Nested routes page layout ke liye use hote hain[cite: 19, 20].

Version 2: In Short

Single Page Application (SPA) mein pages aur navigation ka control.

5. Forms [cite: 21]

Version 1: Detail Mein

Controlled components state ke zariye handle hote hain, jabke uncontrolled DOM ke zariye[cite: 22]. React Hook Form validation ko asaan banata hai[cite: 24].

Version 2: In Short

User input handling aur basic validation techniques.

6. State Solutions & Patterns [cite: 26, 30]

Version 1: Detail Mein

Prop drilling se bachne ke liye Context API use karein[cite: 27, 28]. Anti-patterns jaise state ko directly mutate karna bilkul galat hai[cite: 31].

Version 2: In Short

Global state management aur coding ki common mistakes se bachna.
